No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1989 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

NOTICE

The Subject Index for Volume 132 will appear in the June 1989 issue as part of a cumulative index for Volumes 131 through 133.

Information for Authors

Developmental Biology will publish papers containing new and significant information bearing on developmental mechanisms of general interest. Analysis of development, growth, regeneration, and tissue repair in plants and animals at the molecular, cellular, and genetic levels are topics suitable for the journal. In all areas, analytic rather than descriptive studies will be favored.

Original papers only will be considered. Submission of a manuscript implies the authors' assurance that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Explicit proof of these implied assurances may be required at the Editor's discretion. Articles and any other material published in *Developmental Biology* represent the opinions of the author(s), and should not be construed to reflect the opinions of the Editor, the Publisher, or the Society for Developmental Biology.

Publication of a research article in *Developmental Biology* is taken to imply that the authors are prepared to distribute freely to interested academic researchers for their own use any clone (of cells or DNA or antibodies) used in the experiments reported. Manuscripts that report research involving human subjects must be supported by a copy of the document authorizing the proposed research, issued and signed by the appropriate official(s) of the institution where the work was conducted.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Articles usually do not exceed 15,000 words and must be preceded by an abstract of about 200 words that should be fully intelligible by itself. Brief notes are 1500 words or less, including the bibliography, and should have an abstract of less than 100 words and a limit of one page of figures. All papers will be published in English.

Review and memorial articles are published after specific invitations from the editorial board; they are subject to the same review process as regular articles, but receive priority for publication. These articles are limited to 3000 words.

Manuscripts should be as concise as possible; full documentation of results should be combined with maximum brevity and clarity. Quantitative data should be presented so that the reader can readily judge statistical significance of differences. The discussion section should relate the present work to previous knowledge but should not be expanded into a review of the field. The standard order of sections is: abstract, introduction, materials and methods, results, and discussion. Combined results and discussion may be used. Acknowledgment, references, footnotes, tables, and figure legends should follow the discussion in that order. Number all manuscript pages consecutively and type double-spaced throughout. Provide a running title of 35 or fewer letters and spaces. Use footnotes sparingly; cite them with superscript numbers; type them on a separate sheet. Do not italicize for emphasis.

Abbreviations and units should be used consistently. Consult the lists published in the *Proceedings of the National Academy of Sciences (USA)*, the *Journal of Biological Chemistry*, and *Biochemistry* for standard abbreviations which need not be defined. Collect all abbreviations into a footnote and refer to it at the first use of an abbreviation. The use of units should follow the Système International. Use prefixes, e.g., μM, not 10^{-6} *M*. Note that *M* stands for molar, not mole. Use hr, min, sec, rpm, and cpm without definition, without a period, and without an "s" in the plural (i.e., 20 min).

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the orientation and with the authors' names. *Line drawings* will be reduced in accordance with the complexity of the figures. Good quality prints are acceptable. The maximum size submitted should be 215 × 280 mm. *Photographs* should be submitted as actual size for reproduction, fitting column (90 mm) or page (185 mm) width. Sets of micrographs mounted on light cardboard and in combinations up to 203 × 267 mm in size are acceptable. For best reproduction, provide clear, glossy prints with adequate contrast. The magnification should be indicated by a bar on the photograph. Figures that are to appear together as one plate should have comparable contrast and density and should be mounted on cardboard or paper as close together as possible. Do not combine line drawings and halftones into composite plates; if you wish them to appear together, submit unmounted original art and a layout sheet. The printer will place thin white lines between the figures on each plate. Providing an overlay that indicates the most critical areas of the micrograph will aid in ensuring high-quality reproduction.

Suggestions for *cover photographs* are welcome. Submit them as $8\frac{1}{2}$ × 11-inch color or black-and-white prints to accompany specific articles. A short (one-line) legend should accompany each photograph. *Illustrations in color* can be accepted only if the authors defray the cost; however, authors may apply to the Editor for financial assistance for this purpose.

Tables should be typed on separate pages and numbered consecutively with Arabic numerals; each should have a concise heading.

References to the literature should be cited as: Doe (1987) has observed that . . . ; (Doe, 1988). Doe *et al.* (1988) should be used in the case of articles with more than two authors. Use suffixes a, b, etc., following the date to distinguish two or more works by the same authors in the same year (Doe, 1987a,b). Arrange literature citations in the bibliography according to the surname of the author, using the following styles:

> COLIN, A. M. (1986). Rapid repetitive microinjection. *In* "Methods in Cell Biology" (T. E. Schroeder, Ed.), Vol. 27, pp. 395–406. Academic Press, San Diego, CA.
>
> HOLLEY, J. A., and SILVER, J. (1987). Growth pattern of pioneering chick spinal cord axons. *Dev. Biol.* **123,** 375–388.

Abbreviate journal titles according to *Chemical Abstracts Service Source Index*, 1985. Do not refer to abstracts or papers which have not been accepted for publication.

Proofs and Reprints. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

To submit a manuscript, send two complete copies including illustrations to Peter J. Bryant, Editor-in-Chief, *Developmental Biology*, Developmental Biology Center, University of California, Irvine, California 92717. Telephone (714) 856-4715; E-mail address: PJBRYANT@UCI; Fax number: (714) 856-7399. In the cover letter to the Editor or on the manuscript title page, indicate the name, address, and telephone number of the author who should be contacted in editorial matters.

For information about advertising in *Developmental Biology*, please contact Calvin Caldwell, Advertising Coordinator, Journal Promotion Department, Academic Press, Inc., 1250 Sixth Avenue, San Diego, California 92101 (telephone: (619) 230-1840).

GENOMICS

International Journal of Gene Mapping and Nucleotide Sequencing
Emphasizing Analyses of the Human and Other Complex Genomes

Editors-in-Chief

Victor A. McKusick
The Johns Hopkins University, Baltimore, Maryland
Frank H. Ruddle
Yale University, New Haven, Connecticut

Genomics highlights the emergence of a new area of scientific inquiry—the comparative analysis of the hierarchical organization and evolution of the human and other complex genomes.

- Provides a common meeting ground for those involved in molecular biology and genetics
- Emphasizes the integration of basic and applied research in human and comparative gene mapping, molecular cloning, large-scale restriction mapping, and DNA sequencing and computational analysis
- Publishes full-length and brief research communications, timely reviews, and editorial commentary
- Promotes efficient communication with the major genetic databases

Volumes 4–5 (1989), 8 issues
ISSN 0888-7543
In the U.S.A. and Canada: $168.00
All other countries: $189.00

Sample copies and privileged personal rates are available upon request.

The First Definitive Resource

THE *CHLAMYDOMONAS* SOURCEBOOK

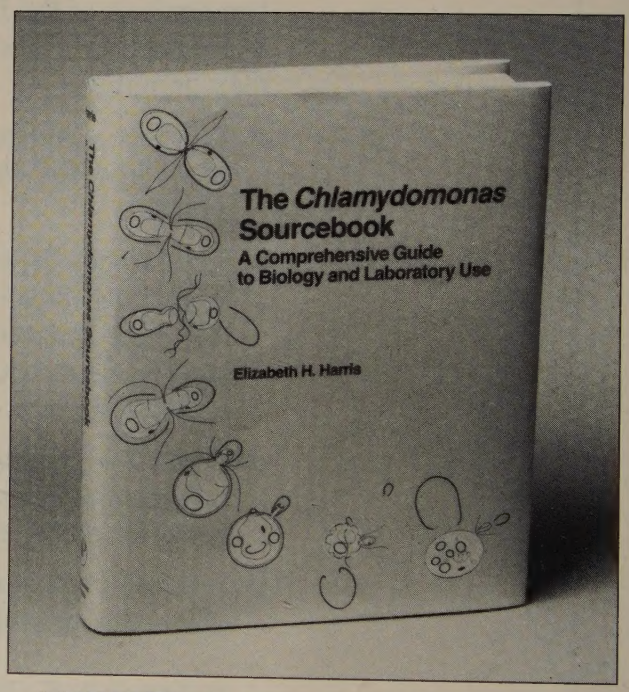
A Comprehensive Guide to Biology and Laboratory Use

Elizabeth H. Harris

This is the *only single source* available that includes all the necessary information on this vital laboratory organism. No other existing book both describes the basic biology of this experimental model system for cellular and molecular biology and at the same time gives instructions for its complete laboratory use. This thorough, self-contained laboratory tool reviews both past and present research, including a significant quantity of previously unpublished data, and is lavishly illustrated with useful diagrams and electron micrographs. **The *Chlamydomonas* Sourcebook** belongs on the lab bench of everyone working with these green algae.

Features:

- Provides access to previously unpublished data from genetic analysis
- Provides descriptions of mutant strains
- Depicts summary tables comparing properties of different species and their mutant strains
- Explains detailed methods for laboratory procedures of general utility
- Furnishes comparisons of culture media
- Presents lists of inhibitors, mutagens, and other additives to culture media
- Assists with common laboratory problems such as contamination and storage of strains
- Demonstrates protocols for laboratory demonstrations suitable for undergraduate teaching.



CONTENTS: An Overview of the Genus *Chlamydomonas*. Culture and Storage Methods. Cell Architecture and Division. The Sexual Cycle. Motility. Metabolism. Photosynthesis. Organelle Heredity. Nucleic Acids and Protein Synthesis. Genetic Analysis. Mutant Strains. Procedures and Resources. Bibliography. Index.

April 1989, c. 766 pages $145.00/£90.00
